

The distance claims for 2 way radios that require a GMRS liscense should be regulated. Paying \$80.00 to be legal before broadcasting just to find out the 5 mile distance is only good for 7 blocks is infuriating!

For A legitimate claim of distance a 95% reception rate should be required to be posted or required print under normal operations. This should not be optimal operation distance.

The public is being cheated first by the retailer then by the F.C.C. when they purchase GMRS equipment advertised for 5 miles when it only reaches .5 (1/2) miles.
